

Kimobetsu Town Disaster Prevention Hazard Map

(Floods, Landslides, and Evacuation shelters)

Revised November 2023

This hazard map is based on a projected maximum rainfall of 425mm over two days.

Please check dangerous areas in advance-your safety depends on it!

Information regarding this disaster prevention hazard map

Map of areas expected to be inundated by floods(maximum expected scale)

Legend for the flood inundation area map

[Disaster prevention hazard map legend]

Legend

- Steep slope collapse (Caution area)
- Steep slope collapse (special alert area)
- Landslide (warning area)
- Landslide (hazard zone)
- Areas where flooding is Expected to cause house collapse, etc. (areas where early evacuation is required)
- Evacuation sites and shelters
- Welfare shelter
- Facilities for people with special needs in Landslide-prone areas
- Facilities for people with special needs in areas expected to be flooded

Legend

Estimated water depth (classification) in case of flooding

- 20.0m or more
- Area between 10.0m and less than 20.0m
- Area between 5.0m and less than 10.0m
- Area between 3.0m and less than 5.0m
- Area between 0.5m and less than 3.0m
- Areas less than 0.5m
- Areas expected to be flooded River with water level notification

[Image of flood depth using flood inundation colors]

[Legend for designated evacuation shelters, etc]

[Designated shelters]

This facility is intended to protect evacuees in the event of large-scale disasters such as earthquakes, wind and floods.

[Designated emergency shelters]

These are evacuation sites for emergency evacuation in the event of imminent danger from earthquakes, wind and flood damage, etc.

[Designated Shelter and Designated Emergency Shelter]

Specified areas within the same site

[Welfare Shelter]

This is a shelter where specialized care and welfare considerations are given to the elderly and people with disabilities who have difficulty living in regular shelters.

Debris flows, landslides, etc.

1. Debris flow danger streams: Streams with a valley topography a riverbed gradient of three degrees or more, where conservation houses are currently located or where residential sites are expected to be built.
2. Areas at risk of collapse due to steep slopes: Areas with a slope of 30 degrees or more and a height of 5m or more, where residential buildings are currently located or where residential buildings are expected to be built.
3. Landslide: A phenomenon in which a part of the land on a gentle slope gradually moves downward. The area is protected by existing houses and is expected to become a residential area.
4. Landslide warning areas are areas where the lives or bodies of residents could be endangered if a landslide occurs.
5. Special landslide warning zones are areas where, in the event of a landslide, damage to buildings is likely to occur and serious harm to life and limb is likely to occur.
6. If you live in a landslide danger zone, be careful during heavy rain, etc., and evacuate early if you sense danger.
7. Landslides can occur even in areas outside of landslide warning zones, so be sure to check the slopes, streams, and evacuation sites around your home.

Shiribetsu River system, Kimobetsu River Flood inundation predicted area
(maximum predicted scale)
Dated April 15, 2022

Disaster prevention weather information released in stages and actions that residents should take

◎Using Weather Alerts

★Habitually gather disaster information. ★Evacuation Guidelines(Cabinet Office, May 2021)

Alert Level	Actions residents should take	Responses by municipalities	Information from the Japan Meteorological Agency,etc.				Equivalent Alert Level
5	Life-threatening Immediate safety action → Safe evacuation is already difficult and lives are in danger. A safer place than where you are now Immediately to	Emergency safety assurance →Information that will definitely be issued	heavy rain Special Alerts		Kikikuru (Risk level Distributed)	flood Occurrence information	Level5
< Be sure to evacuate by level 4 >							
4	Evacuate everyone from dangerous areas → Comparable to the occurrence of major disasters in the past Situation Evacuation should be completed by this stage. If a typhoon or other strong wind is expected,complete Evacuation before the strong wind begins to blow.	Evacuation Order →The 4th Disaster Prevention System Disaster Countermeasures Headquarters Measures	Landslide Warning information	High tide alarm High tide special alarm	Extremely dangerous Very danger	Flood risk information	Level4
3	Elderly people and others should evacuate from dangerous places →People other than the elderly should also refrain from their usual activities as necessary. Prepare to evacuate or evacuate on your own.	Evacuation of elderly people, etc. →the 3rd Disaster prevention System Issue an evacuation order A system that can make decisions	Heavy Rain Flood Warning	Warnings likely to be upgraded to storm surge warnings	Alert (alert level)	Flood Alert Intelligence	Level3
2	Check your own evacuation actions →Hazard map for your home It is important to reaffirm the actual disaster risks and means of obtaining evacuation information .	Second Disaster Prevention System →A system to decide whether to issue an evacuation order,for elderly people,etc. The first disaster prevention system →Assign a liaison officer	High possibility of switching to a heavy rain warning Heavy rain Notice Flood Notice	High tide Notice	Caution (Caution information)	Flooding Attention intelligence	Level2
1	Improving disaster preparedness	Take your mental preparation to the level Confirmation of staff contact system	Early warning Information (Possibility of Warning level)
